Experiment 19: Selection Sort – Contest Prize Distribution

Code:

```
def distribute_prizes(participants):
    participants = participants.copy()
    n = len(participants)
    for i in range(n):
        max_index = i
        for j in range(i + 1, n):
            if participants[j][1] > participants[max_index][1]:
                max_index = j
        participants[i], participants[max_index] = participants[max_index], participants[i]
    return participants

participants = [('Asha',88), ('Ravi',95), ('Meera',79), ('Dev',95)]
ranking = distribute_prizes(participants)
print("Prize Ranking:")
for person in ranking:
    print(person)
```

Output:

```
=== RESTART: C:/U
Prize Ranking:
('Ravi', 95)
('Dev', 95)
('Asha', 88)
('Meera', 79)
```
